Chapter 1 — Biodiversity and Classification

Q.1 — MULTIPLE CHOICE QUESTIONS (8 × 1 = 8)

1. Five-kingdom system was proposed by: (a) Woese (b) Mayr (c) Whittaker (d) Linnaeus

2. Which is NOT a domain of life? (a) Protista (b) Eukarya (c) Archaea (d) Bacteria

3. Fungal cell wall is mainly made of: (a) Silica (b) Chitin (c) Peptidoglycan (d) Cellulose

4. Animal-like heterotrophic protists are: (a) Protozoa (b) Myxomycota (c) Oomycota (d) Algae

5. Gymnosperms have: (a) Seeds in fruits (b) Spores only (c) No seeds (d) Naked seeds

6. Sponges belong to phylum: (a) Mollusca (b) Platyhelminthes (c) Porifera (d) Cnidaria

7. Stinging organelle of cnidarians is: (a) Radula (b) Nematocyst (c) Choanocyte (d) Flame cell

8. Excretory organs of insects are: (a) Metanephridia (b) Malpighian tubules (c) Nephridia (d) Flame cells

Q.2 — SHORT QUESTIONS (6 × 2 = 12)

1. Why are fungi placed in a separate kingdom from plants?

2. How does the water-current system of sponges work?

3. What is the role of nematocysts in cnidarians?

4. Why are flatworms called acoelomates?

5. How does metameric segmentation benefit annelids?

6. Why are arthropods considered the most successful invertebrates?

Q.3 — LONG QUESTIONS (2 × 8 = 16)

Q.3 (a) Describe the salient features of Kingdom Protista and Kingdom Fungi. **(4)**

(b) Differentiate between gymnosperms and angiosperms. **(4)**

Q.4 (a) Describe the structure and systems of organisms in Phylum Annelida. **(4)**

(b) Explain why Phylum Arthropoda is considered the most successful invertebrate group. **(4)**
