Chapter 9 — Human Digestive System

Q.1 — MULTIPLE CHOICE QUESTIONS (8 × 1 = 8)

1. Salivary amylase begins digestion of: (a) DNA (b) Protein (c) Fat (d) Starch
2. During swallowing, trachea is closed by: (a) Soft palate (b) Uvula (c) Tongue (d) Epiglottis
3. Food moves through oesophagus by: (a) Osmosis (b) Peristalsis (c) Diffusion (d) Segmentation
4. Parietal cells of stomach secrete: (a) Bile (b) Pepsinogen (c) Mucus (d) HCl
5. HCl activates: (a) Amylase to maltase (b) Lipase to bile (c) Trypsinogen to trypsin (d) Pepsinogen to pepsin
6. Bile helps fat digestion by: (a) Hydrolysing proteins (b) Neutralizing acid (c) Emulsifying fats (d) Digesting starch
7. Secretin is released due to: (a) Blood glucose (b) Fat in mouth (c) Acidic chyme (d) Stomach protein
8. Villi are mainly found in: (a) Small intestine (b) Oesophagus (c) Large intestine (d) Stomach

Q.2 — SHORT QUESTIONS (6 × 2 = 12)

1. Differentiate between bolus and chyme.
2. How is the secretion of gastric juice regulated?
3. What is the role of bile in digestion?
4. Why does pancreatic juice contain bicarbonate?
5. How are fatty acids and glycerol absorbed in the small intestine?
6. What is the role of the large intestine in digestion?

Q.3 — LONG QUESTIONS (2 × 8 = 16)

Q.3 (a) Describe the structure of the stomach and digestion of food in it. **(4)**
(b) Describe digestion in the small intestine. **(4)**
Q.4 (a) Explain the absorption of digested food in the small intestine. **(4)**
(b) Describe the hormonal control of pancreatic and bile secretions. **(4)**
