Chapter 10 — Human Respiratory System

Q.1 — MULTIPLE CHOICE QUESTIONS (8 × 1 = 8)

1. Actual site of gas exchange in humans is: (a) Trachea (b) Alveoli (c) Nasal cavity (d) Bronchi

2. Surfactant: (a) Transports O2 (b) Lowers surface tension (c) Raises surface tension (d) Digests proteins

3. Inspiration: diaphragm: (a) Stops moving (b) Moves upward (c) Relaxes and domes up (d) Contracts and flattens

4. Inspiration: lung pressure is: (a) Below atmospheric (b) Zero (c) Above atmospheric (d) Atmospheric

5. Haemoglobin contains how many haem groups? (a) Six (b) One (c) Four (d) Two

6. Myoglobin is found mainly in: (a) Plasma only (b) Skeletal and cardiac muscle (c) RBCs only (d) Lungs only

7. Pneumonia mainly affects the: (a) Trachea (b) Alveoli (c) Pleura (d) Nasal cavity

8. Pulmonary TB is caused by: (a) M. tuberculosis (b) Influenza virus (c) S. pneumoniae (d) HIV

Q.2 — SHORT QUESTIONS (6 × 2 = 12)

1. How does the nasal cavity condition incoming air?

2. Why does the trachea have C-shaped cartilage rings?

3. How are alveoli adapted for gas exchange?

4. Explain the mechanism of inspiration and expiration.

5. Differentiate between haemoglobin and myoglobin.

6. What are the causes and symptoms of COPD?

Q.3 — LONG QUESTIONS (2 × 8 = 16)

Q.3 (a) Describe the components of the human respiratory system. **(4)**

(b) Explain the mechanism of breathing. **(4)**

Q.4 (a) Describe the structure and function of respiratory pigments. **(4)**

(b) Describe pneumonia and pulmonary tuberculosis. **(4)**
