12TH BIOLOGY · CHAPTER 14 · CHAPTER TEST

Human Urinary System

Chapter-wise test: 6 MCQs, 5 of 6 short questions, 1 long question

Class: 12th (HSSC Part II)	**Subject:** Biology	**Total Marks:** 26
Chapter: 14	**Time Allowed:** 45 minutes	**Name:** _____

OBJECTIVE PART (6 × 1 = 6)

Q.1 Choose the correct answer.

1. Efferent arterioles of juxtamedullary nephrons give rise to:

(a) Peritubular venules (b) Afferent arterioles
(c) Interlobular arteries (d) Vasa recta

2. Which one of these is not a part of single nephron?

(a) Distal convoluted tubule (b) Collecting duct
(c) Bowman's capsule (d) Loop of Henle

3. Glucose is reabsorbed into blood from the:

(a) Proximal convoluted tubule (b) Glomerulus
(c) Bowman's capsule (d) Collecting duct

4. ADH acts on the walls of the:

(a) Bowman's capsule (b) Proximal convoluted tubule
(c) Collecting duct (d) Loop of Henle

5. About 70% of kidney stone patients have stones of:

(a) Uric acid (b) Calcium oxalate
(c) Cysteine (d) Calcium phosphate

6. Immunosuppressant drugs are prescribed during:

(a) Lithotripsy (b) Haemodialysis
(c) Kidney transplant (d) Peritoneal dialysis

SUBJECTIVE PART — SHORT QUESTIONS (5 × 2 = 10)

Q.2 Write short answers to any FIVE (5) questions.

i. Differentiate the two types of nephrons.
ii. What is glomerular filtration?
iii. Why does the blood in the glomerulus remain under high pressure?
iv. How does ADH relate to diabetes insipidus?
v. Compare the function of glomerular capillaries and peritubular capillaries.
vi. What are the causes of kidney failure?

LONG QUESTION (2 × 5 = 10)

Q.3 Answer both parts.

(a) Explain that the concentration of urine is regulated by counter-current and hormonal mechanisms.
(b) How are kidney stones treated? Also write the problems associated with dialysis.
